

# Nymatrix™

## Seat Cushion

---

The ergoCentric Nymatrix™ seat cushions are made of a nylon micro-fiber matrix coated with our proprietary Nymatrix anti slip technology. Ideal for ergoCentric's tCentric Hybrid task chair with mesh seat, or for use on other chairs and seats.

### Improved Ergonomics

- The anti-slip technology prevents the cushion from falling off the seat and keeps the user securely in place and engaged with the backrest lumbar support.
- The cushions can be added on top of slippery faux leather chairs to increase comfort and reduce slipperiness, helping to prevent slip and fall accidents.
- The Nymatrix seat cushions are designed to be thin, ensuring they don't raise the user too high off the seat. This design also helps maintain the ergonomic curvature of ergoCentric's mesh seats, making them ideal for seated postures.

# Product Specifications

Available in three sizes (½" thick).

## Versatile

- The Nymatrix™ Seat Cushions are a great option if more than one person will use a chair. Depending on personal preferences and needs, some may prefer the additional cushion, making the tCentric Hybrid task chair with mesh seat more versatile.
- The anti-slip technology eliminates the need for the cushions to be affixed to the seat, making them easy to add or remove and use in other areas of the home, office or wherever additional comfort is needed.
- A great option for use on chairs that may be soiled or have deteriorated padding.
- Provides the benefits of a mesh seat with the option to add the Nymatrix Seat Cushion. Ideal if you are undecided between a mesh seat and an upholstered seat.
- Customers with a tCentric Hybrid task chair with mesh seat may use the chair for many years and sit for many hours a day. These cushions provide the option of additional cushioning should they ever want a change from sitting on the mesh seat.

## High performance and design

The sleek design, available in optional Midnight Black and Light Grey colours, offers an aesthetically pleasing and high-quality finish that is akin to ergoCentric's high-performance seating solutions.

## Q&A

### Why would I need this additional cushion if I am buying an ergonomic chair?

We believe the tCentric Hybrid's mesh seat is the best-designed mesh seat on the market. However, like all mesh seats, it requires the use of a rigid frame that can put pressure on the underside of your thighs depending on how you sit and how long you sit. This seat cushion provides additional padding to help you stay comfortable throughout the day, prioritizing your well-being and productivity.
